WE LIBRARY v1.0 — Installation Guide

How to install it, where everything goes, how to use it and what is new (October 2026 edition)

Author: Héctor Fortún Castañón.
Lic. Cybernetics-Mathematics
University of Havana

What WE Library is

WE ("Word and Excel") is a library for C# programmers that creates and modifies Word documents (.docx) and Excel workbooks (.xlsx) without needing Microsoft Office installed. It is not a program you open with a double click: it is added as a reference to a Visual Studio project. Each method is explained in the **"Class WE"** manual; this guide explains how to install it, where everything goes and how to add it to a project.

Requirements

- Windows 10 or Windows 11.
- Visual Studio 2022 (version 17.8 or later) or Visual Studio 2026, with the .NET 8 SDK or later.
- A Windows project targeting `net8.0-windows` or later with Windows Forms enabled (`<UseWindowsForms>true</UseWindowsForms>`).
- The NuGet packages **ClosedXML 0.102.2** and **DocumentFormat.OpenXml 2.16.0** (free, MIT license); how to add them is explained below.
- About 5 MB of free disk space.

Where to download it

The installer is available in Spanish (`WE-Library-v1.0-es.msi`), in English (`WE-Library-v1.0-en.msi`) and in a multilingual version (`WE-Library-v1.0-all.msi`). It is downloaded from:

> https://github.com/HectorFortun2024/WE-Library/releases/latest

How to install it

1. Double-click the installer you chose (for example, `WE-Library-v1.0-en.msi`).
2. If the blue window **"Windows protected your PC"** appears, click **"More info"** and then **"Run anyway"** (the reason is explained in the box below).
3. If Windows asks **"Do you want to allow this app to make changes to your device?"** (Publisher: Unknown), click **"Yes"**.
4. Follow the wizard: accept the license, keep the proposed folder and click **"Install"**.
5. When it finishes, click **"Finish"**.

> **Why does Windows show a warning?**
> WE is free and the installer has no digital signature (a code-signing certificate costs money every year). Windows warns about any unsigned program downloaded from the Internet, even if it is safe. Install it only if you downloaded it from the official link above.

Where everything goes

What	Where
Library	`C:\Program Files (x86)\Hector Fortun\WE Library\WE.dll` (with `WE.deps.json` and `WE.pdb`) **WE.dll** is also copied to the Desktop.
Manuals (PDF)	**Class WE- 02_Mar_2024_English.pdf** and **Clase WE-02_Mar_2024_Español.pdf** In the library folder, with shortcuts on the Desktop and in Start menu › **WE Library** folder.
Test projects	**PruebaWord.rar** and **PruebaExcel.rar**: source code of two sample programs. In the library folder and on the Desktop.
Test prerequisites	**Documents (English)** and **Documentos (Español)** folders, with "Word / Excel Test Prerequisites" in PDF. In the library folder and on the Desktop.
Example files	**Ficheros de los Ejemplos (Examples Files)** folder: AAA.docx, AAANuevo.xlsx, AAAOutput.xlsx and PAISAJE.jpg. In the library folder and on the Desktop.
License and README	**End User Agreement.rtf** (also in Start menu › WE Library) and **ReadmeFirst (LeamePrimero).rtf**, in the library folder.
Source code	https://github.com/HectorFortun2024/WE-Library

How to use it in a project

1. In Visual Studio, open (or create) a Windows project for .NET 8 or later, for example a **Windows Forms App**.
2. In **Solution Explorer**, right-click **Dependencies › Add Project Reference…**, click **"Browse…"** and choose `WE.dll` (from the library folder or from the Desktop).
3. Add the two NuGet packages from **Tools › NuGet Package Manager › Package Manager Console**:

```
Install-Package ClosedXML -Version 0.102.2
Install-Package DocumentFormat.OpenXml -Version 2.16.0
```

Then create a WE object and call its methods, for example `WE.WE we = new WE.WE();`.

Test projects: extract `PruebaWord.rar` or `PruebaExcel.rar` (Windows 11 version 23H2 or later opens .rar files; otherwise 7-Zip or WinRAR is needed), open the project in Visual Studio and build it: NuGet downloads the packages by itself. Read each test's "Prerequisites" first.

How to uninstall it

1. Open **Settings › Apps › Installed apps** (or Control Panel › Programs and Features).
2. Find **WE Library**, click **"Uninstall"** and confirm.

The library, the manuals, the tests and everything copied to the Desktop are removed. Projects that already use WE keep their own copy of `WE.dll` in their `bin` folder.

What is new in this edition

- The Word part now uses **DocumentFormat.OpenXml** (Microsoft, MIT license) instead of DocX, whose license forbade commercial use: WE can now be used in commercial programs.
- `AddParagraph` and `AddTitleType` respect the alignment and bold settings given.
- Images wider than the page are scaled down to fit.
- The page footer shows the number of each page.
- The test projects (.rar) contain only source code: NuGet downloads the rest when building.
- New icon and MIT license: WE is free and open source.

License

WE is distributed under the **MIT** license: you may use, copy, modify and distribute it freely, including in commercial programs. It uses **ClosedXML** and **DocumentFormat.OpenXml**, both under the MIT license. The full text is in **End User Agreement.rtf**.
